STAHL..... PAGES 14 - 21

Quick tips on choosing correct blades:

Teeth = Total number of teeth on perf
 # TPI = Number of teeth per inch
 (These are generally referred as micro perfs.)

ID	OD	TEETH	THICK

This guide is organized first by shaft size, smallest to largest.. Then by number of teeth, fewest to most (except micro perfs).

All images in this guide are actual size for comparison.

"V" shaped tooth

- Maximizes the distance between each tooth in perfs with a low number of teeth such as 6, 8, 12 or 18.
- Increases the strength of the teeth in perfs with a high number of teeth such as 60, 72, 80 or more.

Also

If shaft is adjustable, a slightly wider perf cut can be made.

Crimping perf

- Holds sheets together temporarily.
- Used for processing zig zag folded sheets on a gather - stitcher and envelopes on a perfect binder.

Knockout (punch) perf

- Use when printed product needs perforation in the spine for adhesive binding or air relief.

Reverse Tooth

Standard

Reverse

- Assumes blades are placed on upper slitter shaft.
- Holds fold together on 16 page books.

Round Tooth

- Good for perfin multiple sheets at a time.
